Yongkang Li

Mail: y.li7@uva.nl **Phone:**(+31) 0635630756 **Home Page**

Research Interests: NLP, Information Retrieval, Robust Language Model Embeddings, Recommender systems

Education

- **University of Amsterdam, Informatics Institute**

  Lab: *Information Retrieval Lab* **PhD**, Oct 2023–Jun 2027(expected), Amsterdam, The Netherlands

  Supervisors: Prof. dr. Evangelos Kanoulas and dr. Panagiotis Eustratiadis

  ELLIS PhD Co-Supervisor: Prof. dr. Emine Yilmaz, University College London (UCL)

- **Southern University of Science and Technology, Department of Computer Science and Engineering**

  Lab: *SUSTech-UTokyo Joint Research Center on Super Smart City* **Master**, 2020–2023, Shenzhen, China

  Supervisors: Prof. dr. Xuan Song and Prof. dr. Zipei Fan

- **Beijing University of Posts and Telecommunications, School of Information and Communication Engineering**

  Lab: *Pattern Recognition and Intelligent Systems Laboratory* **Bachelor**, 2016–2020, Beijing, China

Main Research Projects

- **Embedding Robustness and Compression for Dense Retrieval**
  Embedding-based retrieval is widely deployed, yet dense retrievers remain fragile under distribution shifts and adversarial manipulation. My PhD research focuses on the robustness and efficiency of embedding-based retrieval, with two complementary research directions:
  I investigate the generalizability and stability of dense retrievers under distribution shifts, query perturbations, and corpus poisoning. In my recent **TOIS** submission, I systematically evaluate LLM-based dense retrievers and identify robustness gaps that persist despite improvements in model scale and retrieval effectiveness. My earlier work developed efficient corpus poisoning attacks and practical adversarial training methods, published at **SIGIR 2025** and **ECIR 2025**, with the latter receiving the **Best Reproducibility Paper Award**.
  In parallel, I develop post-hoc embedding compression methods that reduce dimensionality while preserving retrieval effectiveness, without retraining the encoder. I proposed Spectral Tempering (**SIGIR 2026**), which derives compression weights from corpus spectral statistics. In my subsequent work (under review at **WWW 2027**), I introduce relevance-guided residual calibration, using limited relevance judgments to refine these weights through direction-specific corrections.
- **Heterogeneous Graph Learning for Location-based Social Network Friend Recommendation**
  This research, part of my master's studies, focuses on friend recommendation in location-based social networks (LBSN) using user trajectory data. We explored the impact of social network relationships on human mobility, particularly long-distance travel. Our approach used heterogeneous multi-graphs and hypergraphs, with novel neural network models for learning and recommendation. The solution achieved state-of-the-art results on multiple real-world datasets and has been published in **TKDD**, **CIKM**, and **WWWJ**.

Industry Experience

Amazon.com, Inc. - Alexa for Shopping (Rufus Science) London, United Kingdom
Applied Scientist Intern (Manager: Gabriella Kazai) Sep 2026–Present

- **Low-Latency Personalized Shopping Page Generation**
  Developing personalized shopping pages for Alexa for Shopping, with tailored product information and comparisons. Researching retrieval-based methods to reduce LLM generation latency.

Temu Inc. - Research and Development Department Shanghai, China
Machine Learning Algorithm Engineer Jul 2023–Sep 2023

- **Conversational Intent Recognition**
  On e-commerce platforms, customers typically have specific intents when communicating with customer service, such as requesting a return, a refund, or inquiring about shipping status. The goal of this project is to assist customer service in quickly identifying the user's intent during conversations, enabling better and faster service. We integrate deep learning methods with traditional feature-matching techniques, combining customer purchase history, current order status, and cleaned dialogue data. This approach has enabled us to develop an automated classification and statistical system that assists customer service agents and supports data analysis for other internal business departments.

Technical Skills

English:
- TOEFL-107, Reading 29, Listening 29, Speaking 23, Writing 26

Programming:
- Python, C++, Linux, Git; strong software engineering and coding practices.
- ML/DS stack: PyTorch, Pandas, NumPy, Scikit-learn, TensorFlow.
- HPC: proficient with Slurm for job scheduling, GPU/CPU resource allocation, and large-scale experimentation.

Self-evaluation

I am intellectually curious and proactive in exploring new ideas. I work effectively under pressure, take ownership of deliverables end-to-end, and collaborate well in teams with a strong sense of responsibility.
